1 What Siddarth expects	3
2 Free and bounded variables	3

1 What Siddarth expects

Knowing what $\mathcal{M} \models \phi$ means when $\mathcal{M}$ is a FO model and ϕ is a FO sentence.

Also formalization.

2 Free and bounded variables

$$P(y) = \underbrace{\forall x}_{\text{bounded}} \left(x + x = \underbrace{y}_{\text{free}} \right)$$
